

## **Potential Redevelopment at Brisebois and Northmount OCTOBER 2015 UPDATE**

Update from NORR (Architects, Planners):

The next meeting with the working group (representatives from the Brentwood Community Association, Brentwood Development Committee, NORR, Lupi Custom Homes, and adjacent residents affected by the construction) on land use and the development permit (DP) will hopefully be before the end of November. The timing of this meeting is dependent on the pace of the City's review of the DP. We're at a stage in the process where we need technical feedback from the City on the proposed site plan and building design and in order to get this feedback we needed to submit an application. Once we have input from the City, we'll have another meeting with the community to address additional questions raised about traffic and parking at the last working group meeting as well as the City's comments. The timing and format of this meeting will be discussed with the City but we're hopeful it can occur by the end of November. Prior to this an email update will be provided to the working group and the Community Association addressing the key traffic and parking questions that came up at the last meeting. These questions relate to traffic on Brockington Road, the potential for a barricade in the lane to direct traffic onto Brisebois, and on-street parking to name a few.
